

ODD FORM COMPONENT OPTICAL INSPECTION SYSTEM

FEATURES

THIS SYSTEM EFFECTIVELY INSPECTS LARGE PARTS THAT ARE DIFFICULT TO DETECT WITH A GENERAL AOI MACHINE

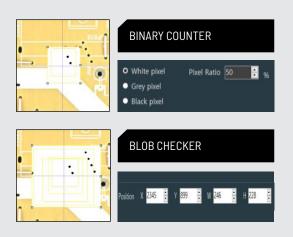

- Detects defects, e.g. Reverse Polarity Missing Broken (and wrong insert through pattern matching, binary counter, brightness, color, width verification algorithm (limited to specific parts)
- Displays schema based inspection results
- Seamless schema editing function for users
- Defect location display function
- GI E based video interface function
- H/W interface function in addition to conveyor units and lighting devices

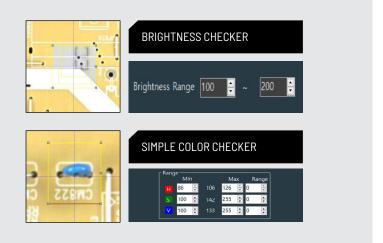

INSPECTION ALGORITHM

IDEAL FOR IN-DEPTH	STRONG-PERFORMING SMT INSPECTION
Pattern Matching	Find the registered image at the target location, and if there is no such image, determine that it is a defect.
Binary Counter	An inspection area is defined as a binary image, the number of white pixels or black pixels is counted, and the presence/absence of defects is determined by a ratio in the whole area.
Brightness Checker	After obtaining the average brightness value for the inspection area, inspects that if this value falls within the specified range.
Width Verification	An algorithm for examining the size of a taught window and its proportion to the width of the object to be inspected Check the width by the difference in brightness of the object.
Simple Color Checker	Verify that the selected area color matches the desired color.

INSPECTION IMAGE

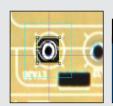

PATTERN MATCHER

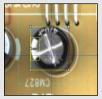

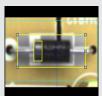

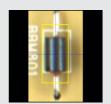

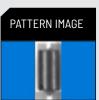

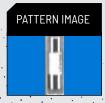

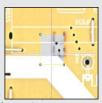

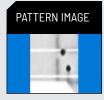

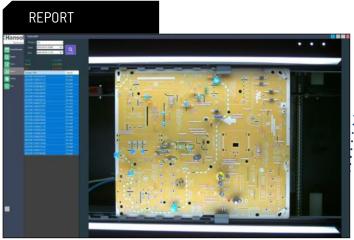

INSPECTION SOFTWARE

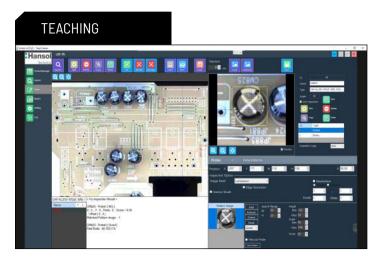

DISPLAY THE INSPECTION INFORMATION AND RESULTS

- Inspection area designation and Algorithm tuning function
- Displays schema-based inspection results
- Seamless schema editing function for users
- Defect location display function in case of defects

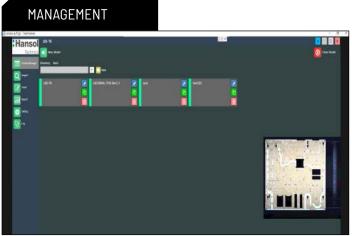

IN-DEPTH REPORT

• Saving inspection result values and images

ENABLE TEACHING MODE

Provides coordinated teaching and simple teaching functions

OPTIMAL MANAGEMENT

• User/ Model management

SPECIFICATION

ITEM 💙	DESCRIPTION
CAMERA	10 Mpixel Area Gie type
Working Distance [mm]	Aout 350mm
Frame Grabber	Mil Library Base
FOV[mm]	350 x 300 mm (standard)
Resolution [µm/pix]	100 um
Inspection Time	2.0s @ 1 PCB Sheet 350x300mm (Excluding PCB transfer time)
Light System	High-intensity LED Light
PC	17 windows10 / 24" WIDE LCD Monitor
Inspection Item	Reverse Polarity, Missing, Broken (cracked) and Wrong Insert (limited to specific parts)
Power	AC 220V 1.0KW
Dimension	1,000 (W) x 1,000 (L) x 2,000 (H)
